WEEKLY MARKETSNAPSHOT

CURRENT ECONOMIC OUTLOOK FOR TIMELY FINANCIAL PLANNING

JULY 28, 2017

Market Commentary

by Scott J. Brown, Ph.D., Chief Economist

As was widely expected, the Federal Open Market Committee (FOMC) left the federal funds target range unchanged, at 1-1.25%, and repeated that it *“expects that economic conditions will evolve in a manner that will warrant gradual increases in the federal funds rate.”* The FOMC also indicated that it expects balance sheet reduction to begin *“relatively soon”* (which is widely interpreted as October, to be announced at the mid-September policy meeting).

GDP rose at a 2.6% annual rate in the advance estimate for 2Q17, matching the median forecast, and the details were largely in line with expectations. Consumer spending growth picked up. Business fixed investment remained strong, although not quite as robust as in the first quarter (with the rebound in energy exploration accounting for nearly half of the first half gain). Residential fixed investment fell, but that followed a sharp weather-related increase in 1Q17. Inventory growth was essentially flat (at the start of the quarter, economists had generally expected to see a sharp rebuilding – that didn't happen).

The Conference Board's Consumer Confidence Index improved in the initial estimate for July, reflecting further improvement in labor market perceptions. The University of Michigan Consumer Sentiment Index edged down, reflecting a dip in expectations (which remain sharply divided by political affiliation). Durable goods orders rose 6.5% in June, due to a surge in civilian aircraft orders (which are volatile).

Next week, attention turns to the monthly data, as July figures (auto sales, ISM survey, employment) begin to arrive. The June personal income and spending figures should help in gauging the consumer's momentum heading into 3Q17. Heavy discounting may help motor vehicle sales. Job growth is likely to have been moderately strong in July, but seasonal adjustment can be tricky (due to the end of the school year, we can expect to lose about 1.2 million jobs in education, prior to seasonal adjustment). One

should take the monthly payroll figure with a grain of salt and focus on the three-month average.

Indices

	Last	Last Week	YTD return %
DJIA	21796.55	21611.78	10.29%
NASDAQ	6382.19	6390	18.56%
S&P 500	2475.42	2473.45	10.57%
MSCI EAFE	1936.45	1937.82	14.99%
Russell 2000	1433.62	1442.35	5.64%

All expressions of opinion reflect the judgment of the Research Department of Raymond James & Associates, Inc. and are subject to change. There is no assurance any of the forecasts mentioned will occur or that any trends mentioned will continue in the future. Investing involves risks including the possible loss of capital. Past performance is not a guarantee of future results. International investing is subject to additional risks such as currency fluctuations, different financial accounting standards by country, and possible political and economic risks, which may be greater in emerging markets. While interest on municipal bonds is generally exempt from federal income tax, it may be subject to the federal alternative minimum tax, and state or local taxes. In addition, certain municipal bonds (such as Build America Bonds) are issued without a federal tax exemption, which subjects the related interest income to federal income tax. Municipal bonds may be subject to capital gains taxes if sold or redeemed at a profit. Taxable Equivalent Yield (TEY) assumes a 35% tax rate.

The Dow Jones Industrial Average is an unmanaged index of 30 widely held stocks. The NASDAQ Composite Index is an unmanaged index of all common stocks listed on the NASDAQ National Stock Market. The S&P 500 is an unmanaged index of 500 widely held stocks. The MSCI EAFE (Europe, Australia, Far East) index is an unmanaged index that is generally considered representative of the international stock market. The Russell 2000 index is an unmanaged index of small cap securities which generally involve greater risks. An investment cannot be made directly in these indexes. The performance noted does not include fees or charges, which would reduce an investor's returns. U.S. government bonds and treasury bills are guaranteed by the US government and, if held to maturity, offer a fixed rate of return and guaranteed principal value. U.S. government bonds are issued and guaranteed as to the timely payment of principal and interest by the federal government. Treasury bills are certificates reflecting short-term (less than one year) obligations of the U.S. government.

Commodities trading is generally considered speculative because of the significant potential for investment loss. Markets for commodities are likely to be volatile and there may be sharp price fluctuations even during periods when prices overall are rising. Specific sector investing can be subject to different and greater risks than more diversified investments. Gross Domestic Product (GDP) is the annual total market value of all final goods and services produced domestically by the U.S. The federal funds rate ("Fed Funds") is the interest rate at which banks and credit unions lend reserve balances to other depository institutions overnight. The prime rate is the underlying index for most credit cards, home equity loans and lines of credit, auto loans, and personal loans. Material prepared by Raymond James for use by financial advisors. Data source: Bloomberg, as of close of business July 27, 2017.
