CURRENT ECONOMIC OUTLOOK FOR TIMELY FINANCIAL PLANNING

SEPTEMBER 7, 2017

Market Commentary

by Scott J. Brown, Ph.D., Chief Economist

The economic calendar was thin and what little there was unsurprising. The August ISM Non-Manufacturing Index was about as expected, but the key details (business activity, new orders and employment) showed some improvement relative to July (consistent with moderately strong growth in the overall economy). The Fed's Beige Book described growth as "*modest to moderate*." Employment growth "*slowed some*," according to the report's summary, with "*reports of worker shortages in numerous industries, most notably in manufacturing and construction*." Most Fed districts noted "*limited wage pressures*," although two (Dallas and San Francisco) indicated that "*labor shortages were pushing up wages*." Thank Bank of Canada, which surprised by hiking short-term interest rates earlier than anticipated.

Fed Vice-Chair announced his resignation, citing "*personal reasons*." Fed watchers had widely anticipated that he would leave by the early part of 2018, so the only surprise was in the timing. Meanwhile, the Senate Banking Committee advanced the nomination of Randal Quarles, Trump's nominee for Fed Governor and Vice-Chair of Supervision.

In a surprise move, President Trump bypassed Republican leaders and reached an agreement with Democratic leaders to provide Hurricane relief, fund the government and avoid the debt ceiling through mid-December. That removes a near-term worry for the financial markets (which feared the possibility of a government shutdown or default on the debt), although we may see tensions rise ahead of the mid-December deadline. Efforts to assess the economic impact of Hurricane Harvey continued, but there was more anxiety regarding the approach of the massive Hurricane Irma.

Next week, the August retail sales figures will be watched closely. Unit auto sales fell last month, but

higher gasoline prices will add to total sales. Higher gasoline prices will also show up in the Consumer Price Index (amplified by the seasonal adjustment, which anticipates lower gasoline prices in August). Market participants will likely be focused on the upcoming Fed policy meeting.

Indices

	Last	Last Week	YTD return %
DJIA	21807.64	21948.10	10.35%
NASDAQ	6393.31	6428.66	18.77%

November 1	—	FOMC Policy Decision (no press conference)
December 13	—	FOMC Policy Decision (Yellen press conference)

All expressions of opinion reflect the judgment of the Research Department of Raymond James & Associates, Inc. and are subject to change. There is no assurance any of the forecasts mentioned will occur or that any trends mentioned will continue in the future. Investing involves risks including the possible loss of capital. Past performance is not a guarantee of future results. International investing is subject to additional risks such as currency fluctuations, different financial accounting standards by country, and possible political and economic risks, which may be greater in emerging markets. While interest on municipal bonds is generally exempt from federal income tax, it may be subject to the federal alternative minimum tax, and state or local taxes. In addition, certain municipal bonds (such as Build America Bonds) are issued without a federal tax exemption, which subjects the related interest income to federal income tax. Municipal bonds may be subject to capital gains taxes if sold or redeemed at a profit. Taxable Equivalent Yield (TEY) assumes a 35% tax rate.

The Dow Jones Industrial Average is an unmanaged index of 30 widely held stocks. The NASDAQ Composite Index is an unmanaged index of all common stocks listed on the NASDAQ National Stock Market. The S&P 500 is an unmanaged index of 500 widely held stocks. The MSCI EAFE (Europe, Australia, Far East) index is an unmanaged index that is generally considered representative of the international stock market. The Russell 2000 index is an unmanaged index of small cap securities which generally involve greater risks. An investment cannot be made directly in these indexes. The performance noted does not include fees or charges, which would reduce an investor's returns. U.S. government bonds and treasury bills are guaranteed by the US government and, if held to maturity, offer a fixed rate of return and guaranteed principal value. U.S. government bonds are issued and guaranteed as to the timely payment of principal and interest by the federal government. Treasury bills are certificates reflecting short-term (less than one year) obligations of the U.S. government.

Commodities trading is generally considered speculative because of the significant potential for investment loss. Markets for commodities are likely to be volatile and there may be sharp price fluctuations even during periods when prices overall are rising. Specific sector investing can be subject to different and greater risks than more diversified investments. Gross Domestic Product (GDP) is the annual total market value of all final goods and services produced domestically by the U.S. The federal funds rate ("Fed Funds") is the interest rate at which banks and credit unions lend reserve balances to other depository institutions overnight. The prime rate is the underlying index for most credit cards, home equity loans and lines of credit, auto loans, and personal loans. Material prepared by Raymond James for use by financial advisors.
